

Features

4100ES control panels introduce a new appearance with new features while continuing to support the extensive and proven Simplex® fire detection and control product features:

- 4100ES products are designed, tested, and listed as compatible with the remote modules and peripherals used with 4100U series fire alarm control panels*
- Both local and remote control panels are available with an InfoAlarm™ Command Center user interface
- Equipment cabinets are available in 1, 2, or 3 bay sizes with color choices of platinum or red
- Upgrade kits are available to provide 4100ES features for installed Simplex control panel models 4020, 4100, 4100+, and 4120

Support is provided for:

- TrueAlarm® sensing and detection products including TrueSense® multi-sensor products for early fire detection
- TrueAlert® addressable and non-addressable notification appliances, including SmartSync™ horn/strobe control
- IDNet™ digital communications for addressable I/O modules, NAC extenders, and related products
- Remote annunciator RUI (remote unit interface) communications ports, and for up to five RS-232 communications ports for multiple remote equipment operation options
- Installation and test convenience that includes WALKTEST™ single person system testing, available with multiple interface options
- The available TrueStart™ test instrument that allows communications wiring to be tested and corrected if necessary *before panel modules are installed*

NEW Install Mode operation:

- **Install Mode** allows grouping of multiple troubles for uninstalled modules and devices *into a single trouble condition* (typical with future phased expansion)
- With future equipment and devices grouped into a single trouble, operators can more clearly identify events from the commissioned and occupied areas

NEW Options provide secure time-saving service tools for authorized personnel:

- The **Building Network Interface Module** (BNIC) provides Ethernet connectivity options for authenticated users to access panel information using service PC tools
- The **Service Gateway** tool allows a single authorized service person to perform remote device testing using text messaging tools to query panel status and confirm work is completed as expected without returning to the panel
- **TrueInsightSM Remote Service** programs provide real-time intelligence and diagnostics for increased uptime and enhanced fire alarm system performance

4100ES 3-Bay Cabinet, shown with optional: InfoAlarm Command Center, and Emergency Voice Equipment

Introduction

4100ES Series Fire Detection and Control Panels

provide extensive installation, operator, and service features with point and module capacities suitable for a wide range of system applications. An on-board Ethernet port provides fast external system communications to expedite installation and service activity. Dedicated compact flash memory archiving provides secure on-site system information storage of electronic job configuration files to meet NFPA 72® (*National Fire Alarm Code*®) requirements.

Modular design. A wide variety of internally mounted modules are available to meet your specific application requirements. Panels can be configured for either Stand-Alone or Networked fire control operation with wired communications or using fiber optics.

Emergency Communications. Emergency communications system equipment is available for both fire alarm and emergency communications/mass notification applications. Amplifiers can be centrally located or distributed at remote MINIPLEX® transponder locations. Audio can be distributed using analog or digital means with either wired communications or with fiber optics connections.

* Refer to individual product data sheets for specific listing details. See partial data sheet list on page 2.
